PLASMI TEORIA CINETICA

FRANCESCO PEGORARO

Anno accademico	2019/20
CdS	FISICA
Codice	355BB
CFU	6

Moduli	Settore/i	Tipo	Ore	Docente/i
PLASMI TEORIA CINETICA	FIS/03	LEZIONI	36	FRANCESCO PEGORARO

Obiettivi di apprendimento

Conoscenze

After completing the course the student will have a solid knowledge of the physics of high temperature dilute plasmas of interest for astrophysics, space physics, thermonuclear fusion studies and high-energy laser plasma interactions. The course is mostly theoretical. The course has an interdisciplinary perspective and is a needed prerequisite for all research activities in physical settings where plasmas are present from space to the laboratory.

Modalità di verifica delle conoscenze

The assessment aims to ascertain the basic knowledge of kinetic plasma physics and, most importantly, the understanding of, and the ability to use the methods that have been developed for the study of a complex system like a plasma.

Capacità

Being able at the end of the course to read and understand a research article in plasma physics

Modalità di verifica delle capacità

Seminar on a specific research article

Comportamenti

Modalità di verifica dei comportamenti

Prerequisiti (conoscenze iniziali)

Mechanich

Statistical mechanics
Electromagnetism in vacuum and in media
Relativistic kinematics

Corequisiti

Basic knowledge in differential equations and integral transforms

Prerequisiti per studi successivi

relevant to spacephysics astrophysics and applications to plasma propulsion and fusion energy

Indicazioni metodologiche

UNIVERSITÀ DI PISA

Learning activities:

- attending lectures
- participation in seminar

Attendance: Advised

Programma (contenuti dell'insegnamento)

Definition of high temperature dilute plasmas, derivation of Vlasov equation. Relationship with fluid plasma descriptions. Linear versus nonlinear plasma dynamics. Vlasov equilibria and plasma waves in a kinetic description; Landau damping. Waves in a magnetized plasma, the method of the characteristics. Low frequency, large scale limit of the kinetic plasma description. Plasma instabilities and anomalous transport properties of a plasma in regimes where thermodynamic equilibrium is absent even at a local level. Quasilinear theory and anomalous diffusion.

Bibliografia e materiale didattico

Krall and Trivelpiece Principles of Plasma Physics or any standard textbook on kinetic plasma theory

Notes on specific subjects distributed by e-mail

Indicazioni per non frequentanti

Modalità d'esame

- Final oral exam

The oral exam consists in a seminar on an agreed subject (the seminar is based on reading and understanding a research article) with free questions related to the seminar subject and covering the material of the course.
